Oil Palm

Elaeis guineensis is a species of palm commonly just called oil palm (Khmer: ឈ្មោះប្រេង), but also sometimes African oil palm or macaw-fat. It is the principal source of palm oil. It is native to west and southwest Africa, specifically the area between Angola and The Gambia; the species name guineensis refers to the name for the area, Guinea, and not the modern country which now bears that name.

Elaeis guineensis - Wikipedia

Like palm kernel oil, red palm oil contains around 50% medium chain fatty acids, but it also contains the following nutrients: Carotenoids, such as alpha-carotene, beta-carotene, and lycopene. Sterols: Vitamin E

Palm oil - Wikipedia

Oil palm, (Elaeis guineensis), African tree in the palm family, cultivated as a source of oil. The oil palm is grown extensively in its native West and Central Africa, as well as in Malaysia and Indonesia. Palm oil, obtained from the fruits, is used in making soaps, cosmetics, candles, biofuels, and lubricating greases and in processing tinplate and coating iron plates.
